Hi mdkberry,

canlan318 has sent you a message about "CDR Reports & Email module + updates":

John Cristoper

1. how to add new records in settings page ?
Originally you didn't mention about add new record function in settings page.
2. Where can I change the report email info, the following items:
 - 2.1 FROM email address : See db.php line 282 and schedule_runner.php line 6
 - 2.2 'Files attach' senders name : same as 2.1
 - 2.3 Subject: Generated Report : See db.php line 283 and schedule_runner.php line 7
 - 2.4 message body text : See db.php line 284 and schedule_runner.php line 8
3. Where can I change the color and font of the email reports?
See displayschedule.php line 8 - line 33
4. Call count reports - should list descending order of TOTAL TIME with longest time at the top.
Last package works as you want. Please check again.
5. Which php file can I add the hyperlinks for '?' symbol.
You did mention nothing about the '?' symbol. So there is only "?" symbol at its position. No other code.
6. Where can I find the variable to control how often code reads the remote MySQL database ?
(requested in original update)
See live_call.php line 116

7. I will test the daily cron jobs tonight and let you know if they are working ok.
I see.

8. I will need to run some tests to analyse the accuracy of the formulas in the code. This will take some time to confirm, and may not happen until I install it for the client in early March. If after this time there are problems found in the formulas or code, I would like them to be fixed without extra cost.
OK. You are welcome anytime.

9. I would like you to agree in writing not to sell or use this software elsewhere for anyone. I am happy for you to use it as an example only, in order for you to win new clients, but never to use it directly in work for any other clients. Please send this confirmation in writing to me via Freelancer so we have a record of the agreement. If you are unsure of what is being asked here, then ask for explanation, as agreeing to this in writing will be taken as a confirmation of your agreement to stand by it and keep the software code confidential.

***** GUARANTEE FOR KEEPING PRIVATE OF YOUR PROJECT RESULT *****

OK. I agree with your request. I guarantee 100% of your project privacy. You may believe me. I will remain responsible on my working package for ever. If any error in the range of your original requirements is found on my work result, i will fix it for free.

10. scheduled email reports not sent overnight
You must configure Windows Schedule Jobs to run cron/schedule_runner.bat periodically.
Please edit cron/schedule_runner.bat file properly before you configure Windows Schedule Jobs.

Please see as references.

<http://www.imranulhoque.com/miscellaneous/install-php-scripts-as-cron-in-windows/>

<http://stackoverflow.com/questions/9894804/use-php-to-set-cron-jobs-in-windows>

11. Live Display pages do not refresh data on a new day. Call/Today shows yesterdays data even after page refresh or reload or closing Firefox and re-opening it. (This was also happening with original code at client site also). It will suddenly fix and start working. Still not sure why this happens. Even though the date in the top left of page shows correct info

It's because timezone difference between your system locale and php engine..
Please edit php.ini file to adjust the timezone properly.

canlan.
